

MKT Accounting Credit Card Processing

Product Description

MKT Credit Card Processing provides the ability to process credit card transactions directly through AccountMate. Credit Card transactions are processed over a secure internet connection from each workstation and do not require any additional equipment or central server software to operate.

All credit card activity is encrypted and recorded in a transaction log that includes very detailed information about the user that processed the transaction. The Add-on also provides additional AccountMate Extended Security options to control which users can process credit card transactions.

Setup of the Credit Card Processing Add-on takes just minutes once all of the on-line account information has been determined.

The MKT Credit Card Processing Add-On supports transactions seven days a week, 24 hours a day offering many features and options that can be tailored to your specific business needs.

Company Profile

Bailey Enterprises is a family business birthed from a vision of creating opportunity. A general partnership between Levi Bailey, the eldest of three sons and his father Bill. Our desire is to make doing business easy, so the AccountMate Solution Providers can add value quickly.
