

JobCost

Product Description

JobCost is designed to provide the tools to maximize productivity and profitability for the small to mid-sized business that needs job or project costing. It is seamlessly integrated with AccountMate's accounts payable, accounts receivable, payroll, inventory control, purchase order and sales order modules for their SQL platform. JobCost's functionality and interface are so similar to AccountMate's; it actually appears to be an AccountMate module.

In the Estimating function, a detailed estimate can be efficiently created with user defined cost codes. An estimate can also be created by copying a prior estimate, template or Excel worksheet. Within the change order function, an estimate for the new change order can be created which is combined with the original estimate to become the working estimate.

The contractor or project manager controls and manages the project with easy access to information such as the project status, important dates, key personnel, billing method, retention percentage, percentage complete, earned revenue, contract amount and billed to date amount. Since the actual costs are posted to the projects from the AccountMate modules in real time, the project manager can quickly review the up to date costs in detail or summarized by cost type and compare them to the estimate.

The Payroll function provides options to post the actual workers compensation insurance, employer payroll taxes and/or overhead costs to the projects. The payroll import feature imports payroll data from the time and attendance application or outside payroll service.

While JobCost utilizes AccountMate screens in the various modules, the purchase of AccountMate source code is not required. Source code is available for JobCost.

Company Profile

iSOFT Systems, LLC has offices throughout the US and in Canada. Since 1990, we have delivered thousands of modifications and provided top quality support to the AccountMate community. The goal of iSOFT Systems, LLC is to develop long-term relationships with our customers by providing professional, competent and courteous service. We strive to increase efficiency in our customer's information systems and personnel with a commitment to honesty, integrity, and quality.

KEY FEATURES

- Installs within AccountMate and functions as if it were an AccountMate module.
- Each job transaction entered in Payroll, Purchase Order, Accounts Payable, Inventory, Accounts Receivable, and Sales Order is immediately posted to the job.
- The job's profitability to date is updated in real time and compared to its estimate.

PRODUCT COMPATIBILITY
